Syllabus – ASTR/PTYS 475/575

Semester and Year this Document Covers
Spring 2024

Course Number and Title
Astronomy 475/575 – Planetary Science 475/575: Planetary Astrobiology

Instructor Information
Professor Sukrit Ranjan
Office: Kuiper Space Sciences Room 428
Phone: 520-626-5874
E-mail: sukrit@arizon.edu
Office hours: Mondays 4-5 PM in Kuiper 428 or by appointment.

Course Description
This course will explore the processes related to planet formation, the properties of planets and the planetary conditions required for the emergence of life. We will study the formation of our Solar System and exoplanetary systems, the distribution and properties of exoplanets, and the potential habitability of other planets/moons in our system or extrasolar systems. The course will also review science cases and possible future astrobiology studies, both in site and via remote sensing, of astrobiologically relevant environments. We anticipate a few guest lectures will highlight particularly exciting and timely topics.

Course Prerequisites or Co-requisites
At least 6 credits in upper division science courses.

Course Format and Teaching Methods
Course Modality: Live in person.
Teaching methods: The class will mostly consist of lectures, delivered in-person. In addition, students will be assigned relevant, seminal papers, which they will read and report on. The class will also involve a collaborative group project in which students will solve a more challenging problem and submit a report on it.

Course Space-Time Coordinates
MoWe 11:00 AM – 12:15 PM, Kuiper Space Sciences Room 312

Course Objectives
The objective of the course is to introduce students to the goals, state of the art, and methods of astrobiological research and relevant scientific and methodological context.

Expected Learning Outcomes
1) Students will understand the goals, scope, and key principles behind astrobiology.
2) Students will learn to the fundamental physical basis of habitable environments.
3) Students will understand how planets form and what processes determine their atmospheric properties and climate.
4) Students will learn quantitative methods to search for and characterize extrasolar planets.
5) Students will develop an understanding of potential habitats in the Solar System.
6) Students will familiarize themselves with research methods typical to astrobiology, including research literature.

400/500 Co-convened Course Information
This is a co-convened course. Although the scope of the material covered in the course is the same for undergraduate and graduate students, graduate students are expected to develop and demonstrate a deeper quantitative understanding of the problems discussed. Graduate students will complete additional, more complex homework problems and will have additional questions in the final exam.

Required Texts and Materials
There is no required book for this course. For those who would like some additional reading material, we recommend "Planetary Science" by Lissauer and de Pater, and "Atmospheric Evolution on Inhabited and Lifeless Worlds" by Catling and Kasting, which are accessible online via the University of Arizona library. Some topics are beyond the scope of these sources, and we will draw from journal articles and other sources in
these cases. We will also assign several journal articles as required reading.

Schedule of Topics and Activities
For the up-to-date weekly schedule and activities, please refer to the class’s D2L page and, in it, the “Course Organization” folder. All assignments will be due at the beginning of class on Wednesdays.

Assessments

<table>
<thead>
<tr>
<th>Assessment Categories</th>

<td>20%</td>
</tr>
<tr>
<td>Total</td>
<td>100%</td>
</tr>
</tbody>
</table>

Final Examination or Project
The assessment will include a group project. Students will form groups (3-5 students in each group) to tackle a more challenging problem. There will be a final exam. This exam will cover material discussed in lecture as well as in the homework. The final exam’s date is TBD.

Grading Scale and Policies
Grades may be adjusted to reflect overall class performance, but as a general rule letter grades will correspond to number grades as follows:

- A: >90%
- B: 80%-90%
- C: 70%-80%
- D: 60%-70%
- E: <60%

Safety on Campus and in the Classroom
For a list of emergency procedures for all types of incidents, please visit the website of the Critical Incident Response Team (CIRT):
https://cirt.arizona.edu/case-emergency/overview

https://arizona.sabacloud.com/Saba/Web_spf/NA7P1PRD161/common/learningeventdetail/crtfy000000000003560

Nondiscrimination and Anti-harassment Policy
The University of Arizona is committed to creating and maintaining an environment free of discrimination. In support of this commitment, the University prohibits discrimination, including harassment and retaliation, based on a protected classification including race, color, religion, sex, national origin, age, disability, veteran status, sexual orientation, gender identity, or genetic information. For more information, including how to report a concern, please see: http://policy.arizona.edu/human-resources/nondiscrimination-and-anti-harassment-policy

University Policies
All university policies related to a syllabus are available at: https://catalog.arizona.edu/syllabus-policies.

Subject to Change Notice
Information contained in the course syllabus, other than the grade and absence policies, may be subject to change with reasonable advance notice, as deemed appropriate by the instructor of this course.

Student Resources
University of Arizona’s Basic Needs Resources page: http://basicneeds.arizona.edu/index.html
Collaboration Policy

Teamwork is a key skill in science, and students are permitted to collaborate on coursework (e.g., working on problem sets together). However, students are expected to obtain and demonstrate individual mastery of the course content. When collaborating on an assignment (e.g., a problem set), please list your collaborators on your submission, and please demonstrate your individual mastery of the content by using your own words and showing your work in detail.

Classroom Attendance

- If you feel sick, or if you need to isolate or quarantine based on University protocols, stay home. Except for seeking medical care, avoid contact with others and do not travel.
- Notify your instructor(s) if you will be missing a course meeting or an assignment deadline.
- Non-attendance for any reason does not guarantee an automatic extension of due date or rescheduling of examinations/assessments.
- Please communicate and coordinate any request directly with your instructor.
- If you must miss the equivalent of more than one week of class, please contact the Dean of Students Office DOS-deanofstudents@email.arizona.edu to share documentation about the challenges you are facing.

Lecture Recordings

For lecture recordings, which are used at the discretion of the instructor, students must access content in D2L only. Students may not modify content or re-use content for any purpose other than personal educational reasons. All recordings are subject to government and university regulations. Therefore, students accessing unauthorized recordings or using them in a manner inconsistent with UArizona values and educational policies (Code of Academic Integrity and the Student Code of Conduct) are also subject to civil action.
