

Joellen Russell named Brown Family Foundations Distinguished Chair in Integrative Science

Professor Joellen Russell, Thomas R. Brown Chair and Associate Professor of Biogeochemical Dynamics in Geosciences at the University of Arizona, uses climate models, supercomputers and robot floats to monitor and predict the ocean's role in the earth's life support system. She currently leads the modeling team for the Southern Ocean Carbon and Climate Observations and Modeling Project, whose mission is to change the scientific and public understanding of the Southern Ocean's role in climate change.

The Thomas R. Brown Foundations are the legacy of Tom Brown and the company he founded and grew in Southern Arizona, Burr-Brown Corporation. The Foundations support people and programs that benefit mankind through education and research, workforce development and civic leadership. The Foundation Trustees are pleased to support Joellen's research, teaching and leadership within the scientific community. Her enthusiasm and scientific rigor create an excellent opportunity to advance these priorities and help us build a brighter future.

Congratulations, Joellen!
