Research interests

My research focuses on models and observations of planetary upper and middle atmospheres. My work covers a wide range of different objects and techniques in the spirit of comparative planetology, spanning from the planets and satellites in the solar system to exoplanet systems. I have authored and co-authored more than 60 peer-reviewed journal articles (18 as first author and 12 as second author) and five book chapters, with 1800+ citations to date.
